THE OPERATIONAL DILEMMA

The same shop carries two very different problems.

Peak demand creates friction. Off-peak capacity sits unused.

10:00 AM

Long wait

At 10:00 AM, customers wait a long time for coffee before work.

3:00 PM

Empty shop

At 3:00 PM, the shop is quiet and staff have little to do.

Core problem: the issue is not just traffic; it is lost revenue, missed opportunities, and operational inefficiency.

Project goal: turn daily sales data into a roadmap that optimizes operations and drives revenue.

TEAM ROADMAP & TECHNICAL ARCHITECTURE

From raw transactions to an interactive decision tool.

Each team pair owns one layer of the workflow.

01

Data Cleaning & ETL

ALY & HAIDY

Cleaned and transformed the data with SQL Server and Power Query; created *vw_coffee_sales* and derived date/time columns.

02

Advanced SQL & Aggregations

RAGAB & TOQA

Calculated peak hours, store performance, and day-part metrics.

03

Power BI & DAX Design

OMNYA & HAGER

Built the model and measures such as AOV and Peak Hour for the interactive dashboard.

Made with GAMMA

EXECUTIVE DASHBOARD

Morning Rush is the commercial center of gravity.

The dashboard turns transactional data into a view of when demand peaks, where revenue concentrates, and how stores compare.

.

PEAK HOUR

10:00 AM

identified with dynamic DAX measures

MORNING RUSH

388K

55.56% of revenue

THREE FINDINGS TO ACT ON

10:00 AM is the peak hour. Demand concentration makes staffing and queue design time-sensitive.

Morning Rush leads performance. It contributes 388K, or 55.56% of revenue, and leads transaction volume.

Store context matters. The dashboard compares Astoria, Lower Manhattan, and Hell's Kitchen to surface location-specific opportunities.

Dashboard Insights

- Peak Hour is 10:00 AM with 18,545 orders and $88,673.39 revenue
- Morning Rush leads day-part revenue with $388,288.67, 81,751 orders, and $4.75 average transaction value
- Friday is the strongest day by revenue at $101,373.00; Saturday is the weakest at $96,894.48
- Hell's Kitchen leads store revenue at $236,511.17, followed by Astoria at $232,243.91 and Lower Manhattan at $230,057.25

Strategic Business Recommendations

Staff scheduling

Add barista and cashier capacity around the 10:00 AM Morning Rush peak.

AOV upselling

Feature Barista Espresso ($91,406.20) with bakery add-ons.

Inventory management

Protect stock for Barista Espresso, Brewed Chai ($77,081.95), and Hot Chocolate ($72,416.00).

Off-peak promotions

Run targeted offers on Saturday and during Afternoon/Evening periods.

Location action

Use Hell's Kitchen as the benchmark; improve Lower Manhattan performance.

SUMMARY & NEXT STEPS

Data becomes useful when it changes the next decision.

Integrated SQL, Power Query, and Power BI to address a real operational challenge.

Converted transactional data into decisions about staffing, upselling, inventory, and off-peak demand.

Next step: carry the same analytical discipline and team collaboration into the Capstone Final Project.
